 MIC
           = Algoritma pan Structur Data 2.
i. A. Hested wop
                                                     e. method main
  a. Deklaras package -> ada -> package Mested loop.
                                                      -) ada -> public
   b. Import library - ) tidak ada
                                                      Static void meun
   C. Bagian class -> ada -> public class no 2 {
                                                     (String args (7) {
  2. Documentation author section -> ala -> # ponjang
 8. Array managunaran laping
   a Decklarasi package - Tidak ada
   b. Import Ubrary -7 tidak ada
  c. Bagian class -> ada->public class array perchangan 3
  d. Documentation Section -> ala -> 11 panjang array 3.
   e. Method main - ada - public static void moin (string args []) {
2. Hested Loop
  package Hested loop
  public Class no 2 C
         public static void moun ( string cogs (7) {
         int x, y;
         for (x = 0; x < = 4; x ++ ) {
            for (y :0; y < x; y++ ) {
               System . out - pnnt (x):
         system . out . printin ( "").
penjelasan:
 X = 0 : X = = 4 ? True -> Langut looping Dalam
y:0; 040 ? false -> Stop looping Salam
print ()
x++; x = 0+1 =1; x = 0 < = 4? True > Larget Looping Davam
y = 0. 0<1? -> True -> print x
 y ++ : y = 0 +1 =1; 121 ? false -> stop looping Dalam
```
